WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a block 36 wide, 34 tall, 12.5 deep. Square all faces.

Tooth (lower 24 mm): full depth. Its top face is the latching face: keep it flat and square to the back. File a 4 x 45 degree lead-in along the outer bottom edge.

Shoulder (top 10 mm): mill or file away the outer 7.5 mm, leaving 5 deep, then file its top back edge to a 5 x 45 degree ramp.

Drill two 6 mm spring holes 8 deep in the inside face, 10 each side of centre, 12 up from the bottom.

Fit: the tooth passes through the back wall and stands 6 proud; the shoulder rests on the inside of the wall (the out stop).

It hooks 4 mm under the dock catch; pressing the thumb button pulls it in 5 mm, 1 mm clear of the catch.

Check: it slides in its slot without binding at any point.
